

Genetics Concepts Gr.1

Thursday 9:30-12:00 @ KMB216

Instructor: Assist.Prof.Dr. Alper Yilmaz

Email: alyilmaz@yildiz.edu.tr

Office Hours: by appointment

<http://avesis.yildiz.edu.tr/alyilmaz/>

Course Goals

In this course, you will learn:

1. Molecular explanations for the terms *dominant* and *recessive*.
2. Phenotype is combination of genotype and environmental effects. Genotype can be single gene or be composed of interactions between multiple genes.
3. Extensions to Mendelian genetics, two gene interactions and cytoplasmic inheritance.
4. Mechanisms governing gene or chromosome mutations.

Course Materials

Most of lecture notes are taken from the following textbook: **Genetics : A Conceptual Approach** (*Benjamin A. Pierce, 4. Edition, 2012*). In addition, occasionally we'll be referring to **Genetic Analysis & Principles** (*R.J. Brooker, 3. Edition, 2007*) as supplementary source.

Lecture notes are handed in copy center across our department. PDF versions of lecture slides can be downloaded from [AVESIS page](#).

Lecture notes contain mostly pics with sparse text, thus you need to listen the instructor and take notes.

IT'S IN THE SYLLABUS

This message brought to you by every instructor that ever lived.

Figure 1: Please read the syllabus

Grading

Your grade will come from the following sources:

- Midterm: 35%
- Final: 40%
- Quiz: 15%
- Assignment: 0%
- Attendance: 10%

Final exam is from the topics covered after midterm exam.

There will be 3 quizzes and highest 2 scores will be considered. If you attend all lectures or miss only one lecture then you'll get 5 points for attendance. For every 1-2 lectures missed you'll lose 1 point.

In previous years, assignments that are 2-3 page long about *Control of eye color in humans* OR *How antibiotic resistance emerges?* were given. Another assignment idea that was experimented was small writings summarizing the lecture submitted at the end of the lecture. Due to large class size, this year most likely no assignments will be given. More details regarding assignments will be provided in near future.

Communication

I'm trying to respond emails as quickly as possible. If you don't get a response within 1-2 days please don't hesitate to send a reminder email.

The changes pertaining to exam date, time and assignment due dates should be decided in class after discussing with everybody. Please don't ask for changes individually, otherwise notification of whole class becomes a hassle.

Schedule

Below is the tentative schedule for the course. Depending on the speed we go through topics there might be shifts in the schedule. **NOTE** : The midterm date is just a forecast, so **the midterm will take place on the date and time the department announces.**

September 18. Introduction

General information about the lecture such as grading policy, course materials, etc. is provided. Then we briefly look at the connection between gene and trait. Also, we'll be told how gene alleles emerge and finally we'll be introduced the concept of *reverse genetics* and *forward genetics*.

September 25. Genotype and Phenotype

October 2. Chi-square test

October 9. Extensions of Mendelian Inheritance

Chapter 4 in our textbook

October 16. Extensions of Mendelian Inheritance (cont'd)

Chapter 4 in our textbook

October 23. Mendelian Inheritance Patterns Involving Two Genes

Chapter 5 in our textbook and *Chapter 4* in our supplementary textbook.

October 30. Cytoplasmic (Extranuclear) Inheritance

Chapter 5 in our textbook and *Chapter 5* in our supplementary textbook.

(November 6). MIDTERM

November 13. Recombination, linkage and genetic mapping

Chapter 7 in our textbook and *Chapter 6* in our supplementary textbook.

Chromosomal or Gene Mutations

November 20. Chromosome Variations

Chapter 9 in our textbook and *Chapter 8* in our supplementary textbook.

November 27. Gene Mutations

Chapter 18 in our textbook.

December 4. Gene Mutations (con't) and DNA repair

Chapter 18 in our textbook.

December 11. Quantitative Genetics

Chapter 24 in our textbook.

December 18. Quantitative Genetics (cont'd)

Chapter 24 in our textbook.

Next Topic. DNA modifications (without sequence change): Genomic Imprinting and Epigenetics

Chapter 17 in our textbook and additional materials.
