Some authors studying on educational theories put behaviorism, cognitive and constructivism under the traditional learning theories despite some others never mention connectivism as a learning theory. Their claim is that connectivism is the learning theory of this age, which is known as the digital age. However, constructivism is generally regarded as the most modern approach in Turkey and the curriculum was designed according to the characteristics of constructivism from 2005 onwards. For some others, 2005 is the year when connectivism took the place of "traditional" approached to education. This study aims to present the factors that make connectivism different from behaviorism, cognitivism and constructivism.

Keywords: Connectivism, Behaviorism, Cognitivism, Constructivism

CALL FOR PAPERS

descarcă programul conferinței ICSED 2015

The Faculty of Science of Education from "Stefan cel Mare" University is pleased to invite you to participate at the 13th edition of the International Conference on Sciences of Education at Suceava, on May, 28-29, 2015.

The Conference proposes a framework for communication and academicals experiences sharing in order to facilitate the professional development and the interuniversity cooperation within the European educational space.

The topics addresses to all the practitioners (teachers of all grades, school counselors, researchers, trainers) from preuniversity and university education who want to contribute to the raising the quality in education.

This conference unifies the results of the researches from European countries, and it tries to offer the opportunity for initiating the new projects within the field of educational sciences.

The ICSED 2015 intends to facilitate the meeting with recognized international experts, researcher and students research from educational field.

The ICSED 2015 provides new opportunities of learning through preconferences training sessions, workshops and symposiums.
